- *Titolo della tesi*: Topics in Bayesian population inference for Gravitational Wave Astronomy

Questa tesi esplora diversi argomenti relativi all'inferenza bayesiana nell'astronomia a onde gravitazionali. Dall'inferenza gerarchica sulla popolazione di fusioni di buchi neri binari di massa stellare, allo sviluppo di una routine di stima dei parametri end-to-end per interferometri spaziali. Altri argomenti sono investigati: popolazione di nane bianche binarie in galassie satelliti della Via Lattea; vincoli dal fondo stocastico sul lensing di onde gravitazionali da fusioni di stelle di neutroni binarie e buchi neri binari; tecniche statistiche per l'inferenza simultanea su più sorgenti indistinguibili.
